

## Local Polarimetry update for Run 11

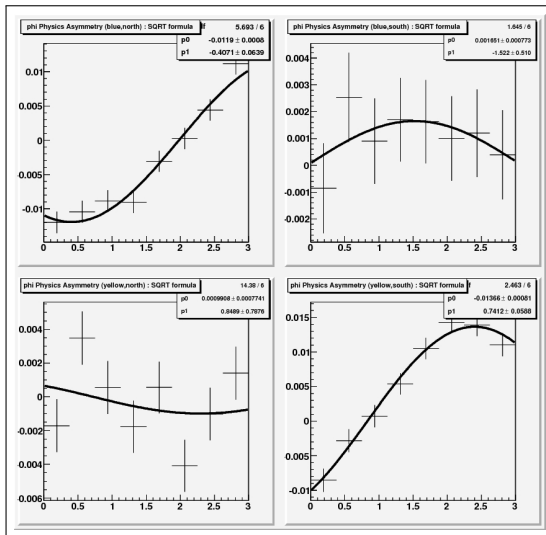

Ciprian Gal for the Local Polarimetry Group

Stony Brook University

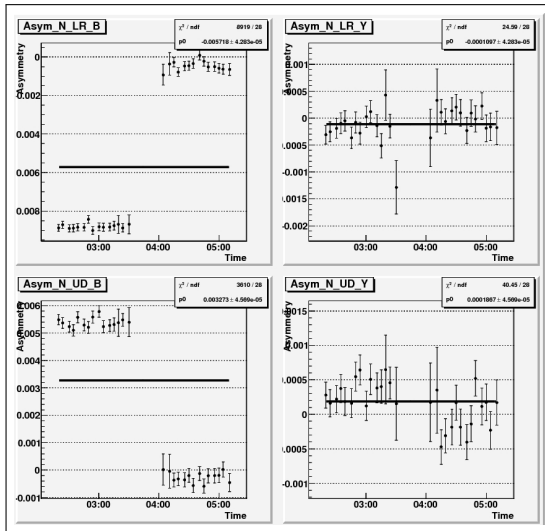

February 25, 2011

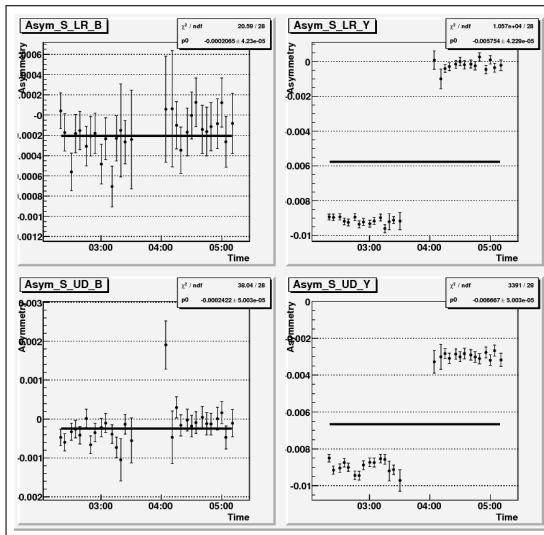

# Fill 15233

- Had two rotator voltages (settings) on the course of one fill
- One with large offset from longitudinal setting (but not fully transverse)
- One new setting for our longitudinal running

- Blue:  $(-38.3 \pm 3.8) \%$  with  $\phi_{offset} = (-0.41 \pm 0.06) [\text{rad}]$
- Yellow:  $(-38.9 \pm 2.8) \%$  with  $\phi_{offset} = (-0.74 \pm 0.06) [\text{rad}]$

- Confirm Scaler result with Classical Local Polarimetry measurements (next couple of days)
